CORE SKILLS

- LV/MV/HV Systems
- FAT / SAT
- IEC 60034
- IEEE 112
- NEMA MG-1
- API 541
- ATEX
- Switchyard Ops
- Grid Coordination
- LOTO / PTW
- Protection Relays
- HSE Compliance
- RCA / Troubleshooting
- Team Leadership

PROFILE

Electrical & Power Systems Engineer with 5+ years of operations and maintenance experience across LV/MV/HV systems in a 300 MW power plant environment, and independent third-party Factory Acceptance Test (FAT) inspection experience for international clients including BP, ADNOC and Blutek Srl. Recently completed an M.Sc. in Electric Transportation Systems at LUT University, adding electrification and grid-integration expertise to a strong industrial O&M foundation. Comfortable leading shift teams, coordinating with national grid dispatch centers, and verifying equipment compliance against IEC, IEEE, NEMA and API standards prior to shipment.

EXPERIENCE

Independent Third-Party FAT Inspector

Contract · via ABB Oy Helsinki / TÜV Austria BTASH / Applus+, Finland · 2025 - Present

- Conduct on-site Factory Acceptance Testing of HV motors and electrical equipment for international clients including BP and ADNOC.
- Verify compliance with API 541, NEMA MG-1, IEC 60034, IEEE 112 and ATEX standards on motors up to 8 MW.
- Witness mechanical, electrical and bearing tests; review manufacturer technical specifications and documentation prior to sign-off.
- Draft full inspection reports on-site and coordinate directly with manufacturer and client engineers to resolve technical queries.
- Key projects: BP Kaskida (1,119 kW compressor motor), ADNOC Sahil Phase 3 (8 MW synchronous motor), Blutek Srl synchronous motors.

Operation & Maintenance Engineer

APR Energy · 300 MW Power Plant, Keraniganj, Dhaka · May 2018 - Jul 2023

- Led shift operations across LV/MV/HV systems, ensuring continuous and safe plant performance.
- Coordinated real-time load dispatch with the National Load Dispatch Center (NLDC).
- Performed switchyard operations including synchronization, isolation and equipment safety procedures across the 400V generator → 400V/11kV step-up → 11kV switchyard → 230kV grid interconnection chain.
- Conducted inspections, preventive maintenance and fault diagnosis; enforced HSE compliance across all shift activities.
- Improved equipment uptime by streamlining preventive maintenance procedures and leading reliability-focused initiatives.

CORE STRENGTHS

- ✓HV/MV equipment compliance verification against IEC, IEEE, NEMA & API standards

✓Grid synchronization & national dispatch coordination

✓Root-cause diagnostics on live testing anomalies

✓Cross-functional coordination with manufacturers & clients

✓Shift team leadership & HSE compliance enforcement

✓Technical documentation & inspection reporting

NOTABLE PROJECTS

BP Kaskida — HV Compressor Motor FAT

ABB Oy, Helsinki · Feb & May 2026

- FAT of a 1,119 kW HV compressor motor for BP's Kaskida deepwater project; traced a vibration anomaly to adjacent test-field interference and resolved it through re-testing.

ADNOC Sahil Phase 3 & Blutek Srl — Synchronous Motor FAT

via TÜV Austria BTASH / Applus+ · ABB Oy, Helsinki · 2026

- FAT of an 8 MW synchronous motor against IEC 60034 & ATEX; separately verified Blutek Srl synchronous motors prior to shipment.

M.Sc. Thesis: Megawatt Charging Systems for Heavy-Duty EVs

LUT University, Lahti Campus · 2025

- Techno-economic analysis of BE-HDEVs and megawatt charging systems, covering battery chemistries and fast-charging grid compatibility.
